

数据标注

流行标注工具

- **Labelimg** 矩形标注
- **Labelme** 多边形标注
- **Label Studio** 万能的标注软（矩形、多边形、打点、遮罩等..）

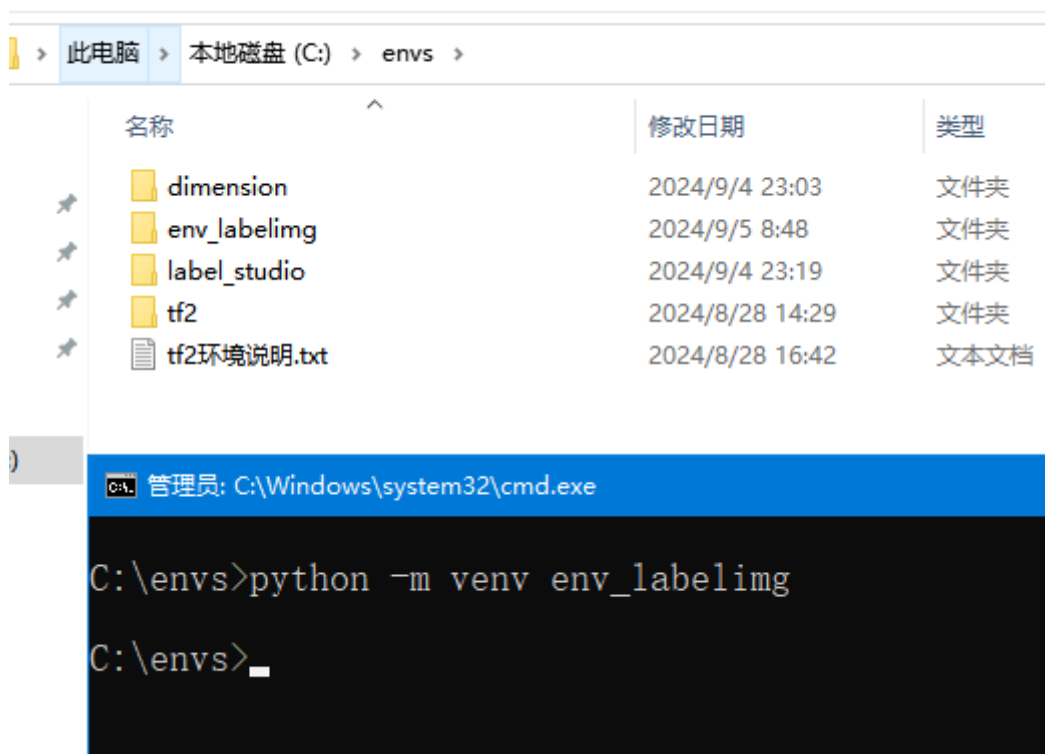

Labelimg 环境搭建

```
# 步骤1、安装pyqt5、lxml
pip install pyqt5
pip install lxml

# 步骤2、进入到labelimg源码根目录运行
python labelimg.py
```

演示

- 1. 利用python自带的venv 创建虚拟环境

- 2 激活虚拟环境

此电脑 > 本地磁盘 (C:) > envs > env_labelimg > Scripts

名称	修改日期	类型	大小
activate	2024/9/5 8:48	文件	2 KB
activate.bat	2024/9/5 8:48	Windows 批处理...	1 KB
Activate.ps1	2024/9/5 8:48	Windows Power...	26 KB
deactivate.bat	2024/9/5 8:48	Windows 批处理...	1 KB
pip.exe			
pip3.11.exe			
pip3.exe			
python.exe			
pythonw.exe			

```
管理员: C:\Windows\system32\cmd.exe
C:\envs>python -m venv env_labelimg
C:\envs>cd env_labelimg
C:\envs\env_labelimg>cd Scripts
C:\envs\env_labelimg\Scripts>activate
```

```
管理员: C:\Windows\system32\cmd.exe
(env_labelimg) C:\envs\env_labelimg\Scripts>_
```

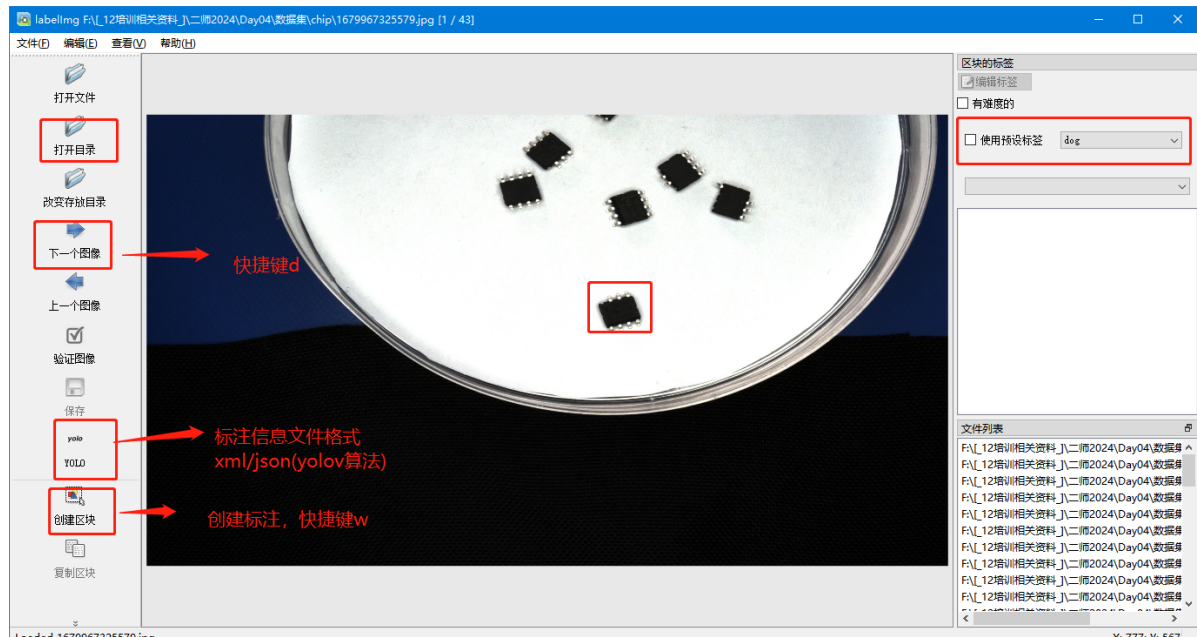

- 3. 安装两个库

```
pip install pyqt5
pip install lxml
```

```
管理员: C:\Windows\system32\cmd.exe
管理员: C:\Windows\system32\cmd.exe - pip install pyqt5
(env_labelimg) c:\labelImg-master>pip install pyqt5
Looking in indexes: https://pypi.tuna.tsinghua.edu.cn/simple
Collecting pyqt5
  Using cached https://pypi.tuna.tsinghua.edu.cn/packages/56/8ec9/PyQt5-5.15.11-cp38-abi3-win_amd64.whl (6.9 MB)
Collecting PyQt5-sip<13,>=12.15 (from pyqt5)
(env_labelimg) c:\labelImg-master>
(env_labelimg) c:\labelImg-master>pip install lxml
Looking in indexes: https://pypi.tuna.tsinghua.edu.cn/simple

  Downloading https://pypi.tuna.tsinghua.edu.cn/packages/c3/b5/1cml-5.2.0-cp311-cp311-win_amd64.whl (2.9 MB)
```

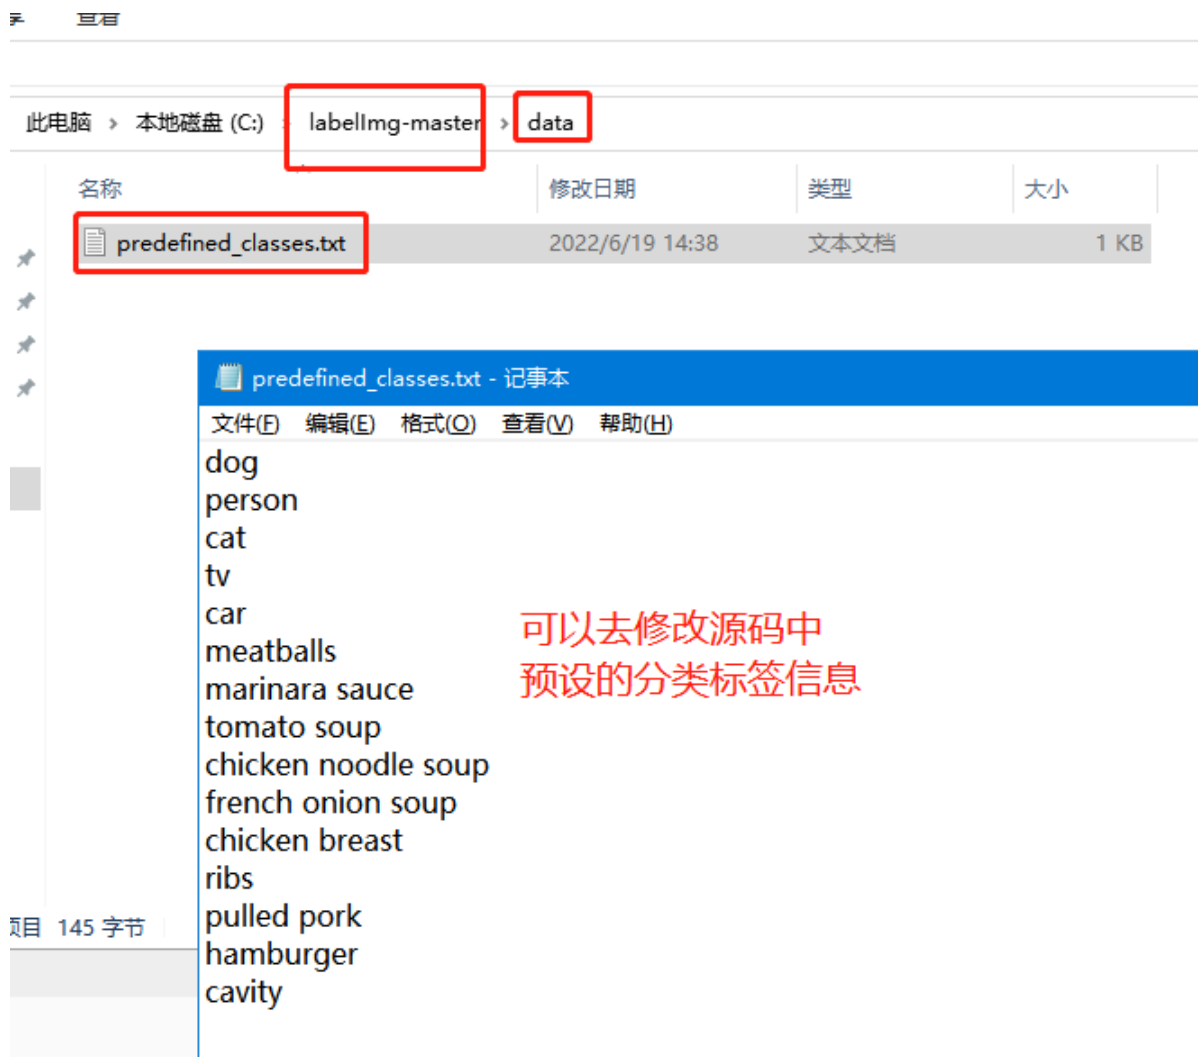

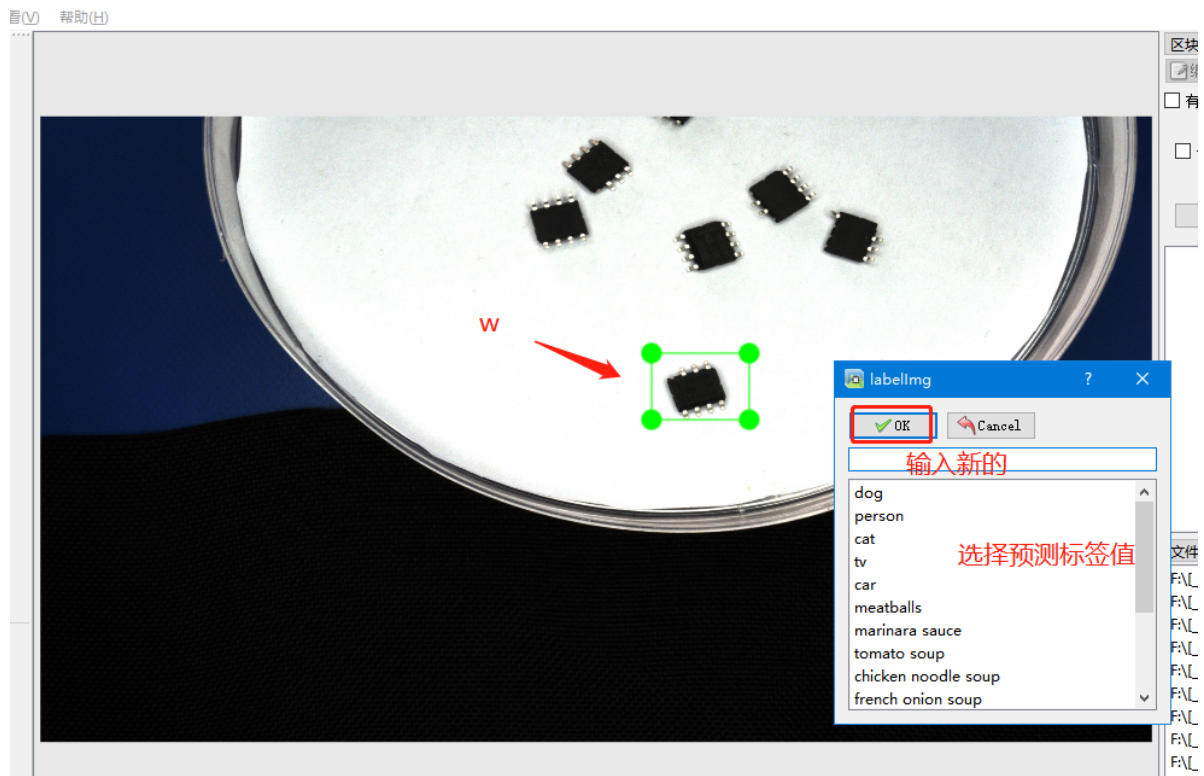

- 3. 进入labelimg 源码，运行labelimg

```
(env_labelimg) C:\envs\env_labelimg\Scripts>cd c:/
(env_labelimg) c:\>cd labelImg-master
(env_labelimg) c:\labelImg-master>python labelImg.py
```

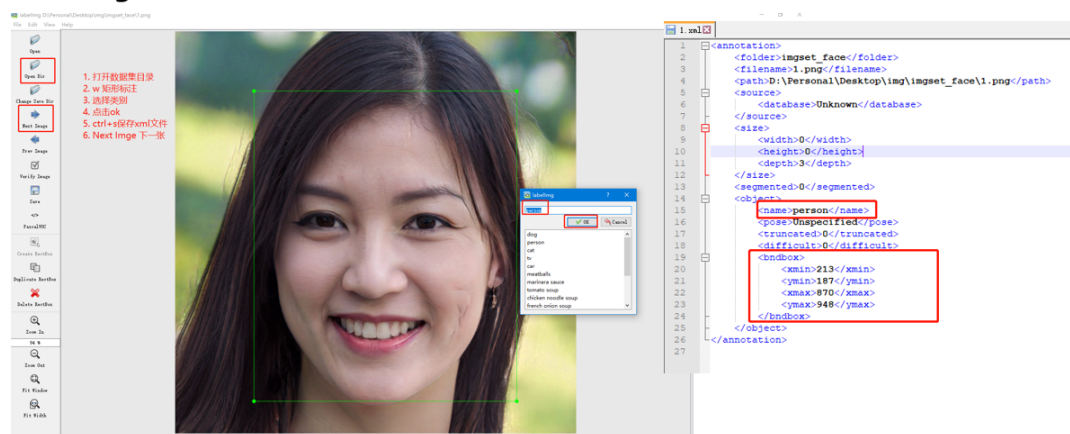

快捷键	注释
Ctrl + U	加载目录中的所有图像，鼠标点击Open dir同功能
Ctrl + R	更改默认注释目标目录(xml文件保存的地址)
Ctrl + S	保存
Ctrl + D	复制当前标签和矩形框
Space	将当前图像标记为已验证
W	创建一个矩形框
D	下一张图片
A	上一张图片
Del	删除选定的矩形框
Ctrl++	放大
Ctrl--	缩小
↑→↓←	键盘箭头移动选定的矩形框

labellmg快捷键

■ Labelling标注人脸

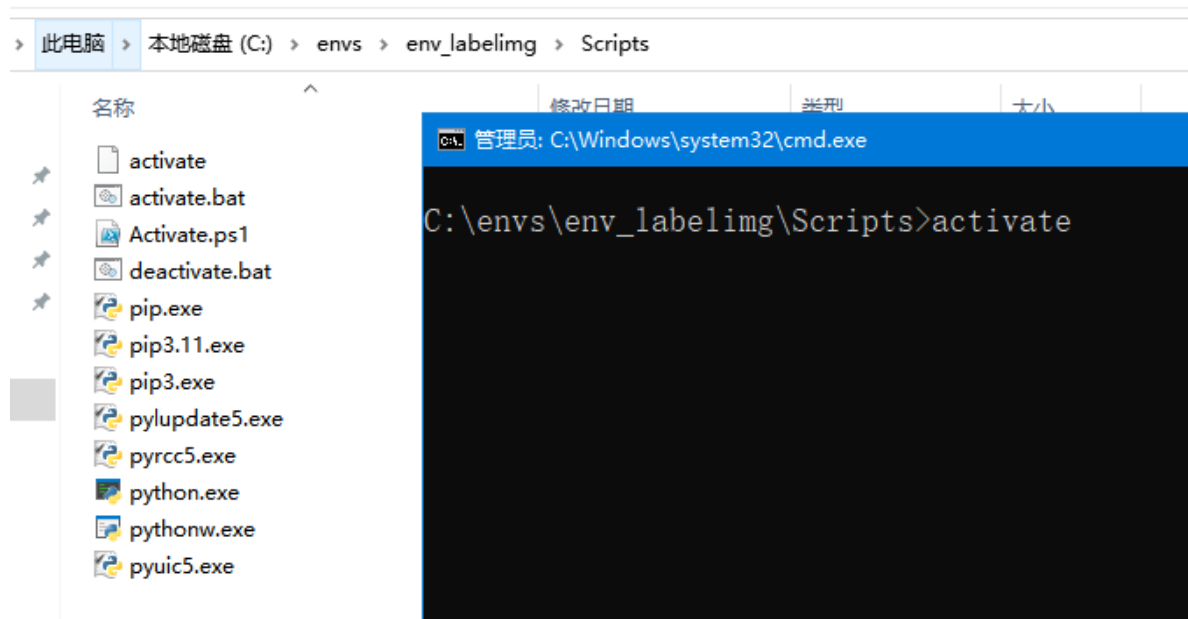

Labelme

依然依赖 pyqt5、lxml

直接和labelimg 使用一个虚拟环境

安装步骤

1. 激活虚拟环境

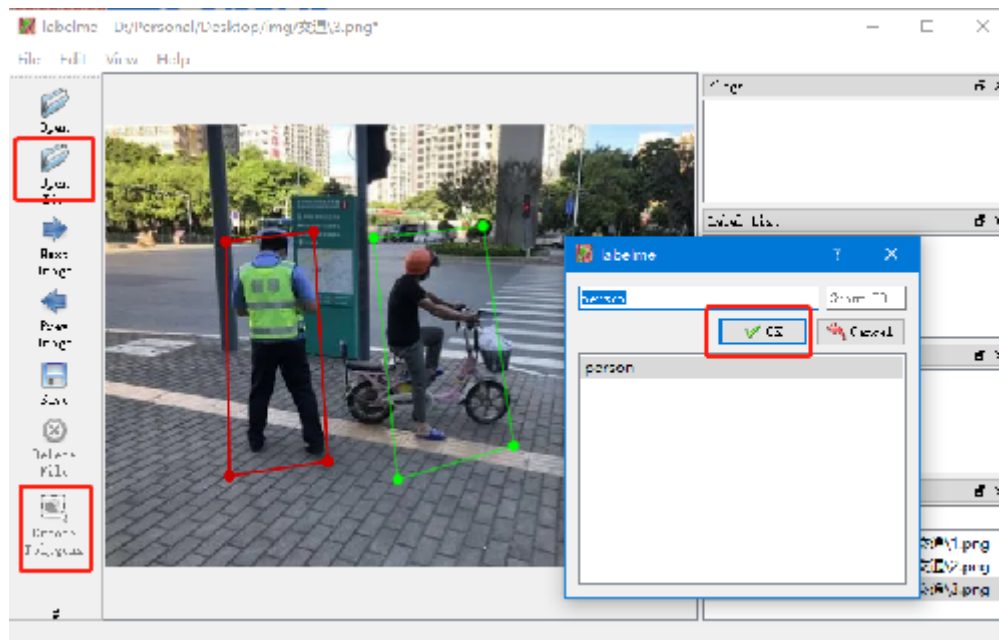

2. 进入到labelme目录运行安装

```
pip install labelme
```

```
(env_labeling) c:\>cd labelme-master  
(env_labeling) c:\labelme-master>pip install labelme_
```

3. 直接输入: labelme

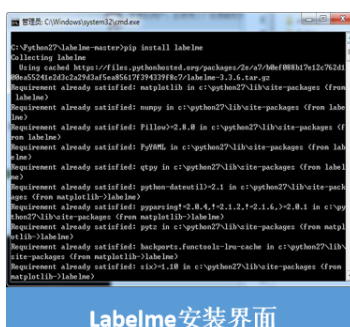

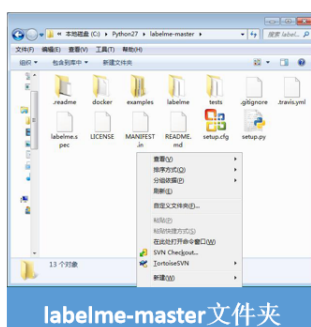

快捷键和labelimg相同

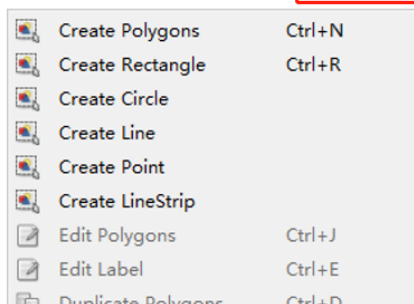

- w 标
- d 下一张
- a 上一张

7.1.2 Labelme工具安装与使用方法

Labelme操作功能介绍

- Labelme除了能够创建多边形选框，还能够创建矩形、圆形、直线、点、曲线等标注区域。

Label Studio

安装教程参考博客：

- [1. 数据标注--Label-studio 安装配置 label-studio安装-CSDN博客](#)

1. 安装

```
pip install label-studio
```

2. 启动

```
label-studio start
```

```
管理员: C:\Windows\system32\cmd.exe - label-studio start

(label_studio) C:\envs\label_studio\Scripts>label-studio start
=> Database and media directory: C:\Users\Administrator\AppData\Local\
=> Static URL is set to: /static/
```

A full-fledged open source solution for data labeling

Did you know?

You can sync data from all popular cloud storage providers to collect new items for labeling as they are uploaded, and return the annotation results to train and continuously improve models. [Learn more](#)
